

Professor Yanelly Cordero
College Prep
MDC Homestead Campus

Students will conduct internet research about Bill Baggs Cape Florida State Park.
Each group will be assigned a different topic.

Examples: the native plants found in the park; the invasive non-native plants; the history of the park and the people that inhabited it.

The students will read as much as they find about their assigned topic. Then once the research is complete, the students will prepare a group PowerPoint presentation including the background information they learned, how the park impacts our community, as well as different ways in which people can go and enjoy this natural resource more.

The students will receive three grades:

- 1) for conducting the research
- 2) for including the knowledge they learned by preparing the Powerpoint Presentation
- 3) for the oral presentation in front of the class.
