North Campus Library
Environmental Sustainability Mini Display

To increase visibility of and inquiry into the issue of environmental sustainability, the North Campus library will reach out to students and the rest of the MDC North Campus community by mounting a mini display of resources devoted to environmental sustainability.

First, several DVDs and books related to environmental sustainability will be ordered for the library, to supplement what we already have. Example subject areas for the resources are recycling, water, alternative energy sources, and green building. After the resources have arrived and been cataloged and processed, the library mini display will be set up with these DVDs and books, along with other resources the library already owns. The resources will be on an open display, so they can be taken off the shelf by students, faculty, or staff, and taken immediately to the service desk to be checked out.
